

Introduction To Smart Meters

Find out all about this technological revolution and how to take advantage of the many career opportunities being created.

Why choose a career in Smart Meter Installation?

The UK Government has committed to reduce carbon emissions by 80% by 2050 and has set a target for around 50 million homes and small businesses to have a smart meter installed by 2020. Using Smart Meter technology consumers will know how much energy is being used in their home via a digital display. This helps customers to have a better understanding of their own energy usage. Smart Meters also allow energy companies to manage demand across the country, enabling the stability of gas and electricity supplies. There are jobs nationwide for enthusiastic, customer focused individuals to help consumers understand and transform how they use their energy in the future. Those that find work in the sector could be involved in meter installations, maintenance, repairs and customer advice and guidance.

This programme gives you a clear understanding of what this sector is; what types of job roles there are; how to get into these roles and better understand if it's a career path for you.
